

## Philotech - We love Engineering

For more than 30 years we have been a strategic development partner in Germany, France, Spain and UK for our customers in the aerospace, defence, automotive, transportation and telecommunications industries. As a company of the Bertrandt Group, we stand for innovation and quality within our core competencies Software Engineering, Validation & Verification, Systems Engineering, Support Engineering, Functional Safety as well as IT & Embedded Security. Our experts accompany projects from conception through implementation to successful completion.

### Software Maintenance Engineer (m/f/d) for radio systems (Ref.-Nr.: 2021-1160)

Location: 20% Munich, 80% Remote

#### Your tasks:

The software products enable users to control and monitor radios from remote. The control and monitoring capabilities focus on control for maintenance purposes and on control for operational purposes.

Software maintenance for the mentioned software products includes the following services:

- Handling and creation of defects and tickets via ticket system
- Testing (regression testing for support type 2 approval)
- Documentation (update operational and installation manuals, test procedures and test reports)
- Consulting service for customer (via phone, e-mail or by on site workshops) regarding the usage of software

#### Your profile:

- Successfully completed studies in electrical engineering, computer science, engineering or comparable qualification
- Experience in testing client / server systems
- Expertise in ATC communication systems
- Expertise in radio products (R&S)
- Usage of IBM Jazz/RTC and defects management
- Fluent German and English Language skills

## Our Offer:
